Keep Serenity provides a decrease in the violence that people face. There are situations where people who suffered violence cannot notify related people instantly. There were applications for this problem, but they have never been enough for individuals who suffer violence because such applications need physical user interaction to notify related people. To solve these problems, we came up with the idea of KeepSerenity. KeepSerenity allows users to activate the help mode by saying a specific phrase they choose. Help mode will send the location of the user to the people that are in the emergency contact list via SMS and email.
