# EasySell

Bilkent University
Computer Engineering

As online shopping now accounts for more than 20% of all retail purchases in 2020, the number of ecommerce platforms increased dramatically. For online sellers, managing all of those platforms separately causes time and energy waste.

In this project, we developed a user-friendly, secure and reliable multi-channel ecommerce platform called EasySell which enables users to manage their online seller accounts from different platforms simultaneously and provides users with functionalities like sales analysis and order management.
